RELATIONS BETWEEN TASTE PERCEPTION OF
GLUTAMATE AND pH VALUE. [1963] 9p. 4 refs.

Vegetables, Hydrogen ion concentration.

There is deduced a quantitative connection between
perceptive glutamate effect and the pH value of a food.
When peas and beans were sterilized with an infusion
solution weakly alkalized with calcium hydroxide there
was found at the organoleptic testing a surprisingly-
good taste, which it was possible to ascribe to a
calcium-glutamate formation. With beans this effect
does not occur with all varieties. (Author)
